INFORMATION NETWORK SECURITY

Dr/ Amr Wageeh

Lecture 3

SIMPLIFIED DES

Key Generation:

- S-DES depends on the use of a 10-bit key shared between sender and receiver.
- From this key, two 8-bit subkeys are produced for use in particular stages of the encryption and decryption

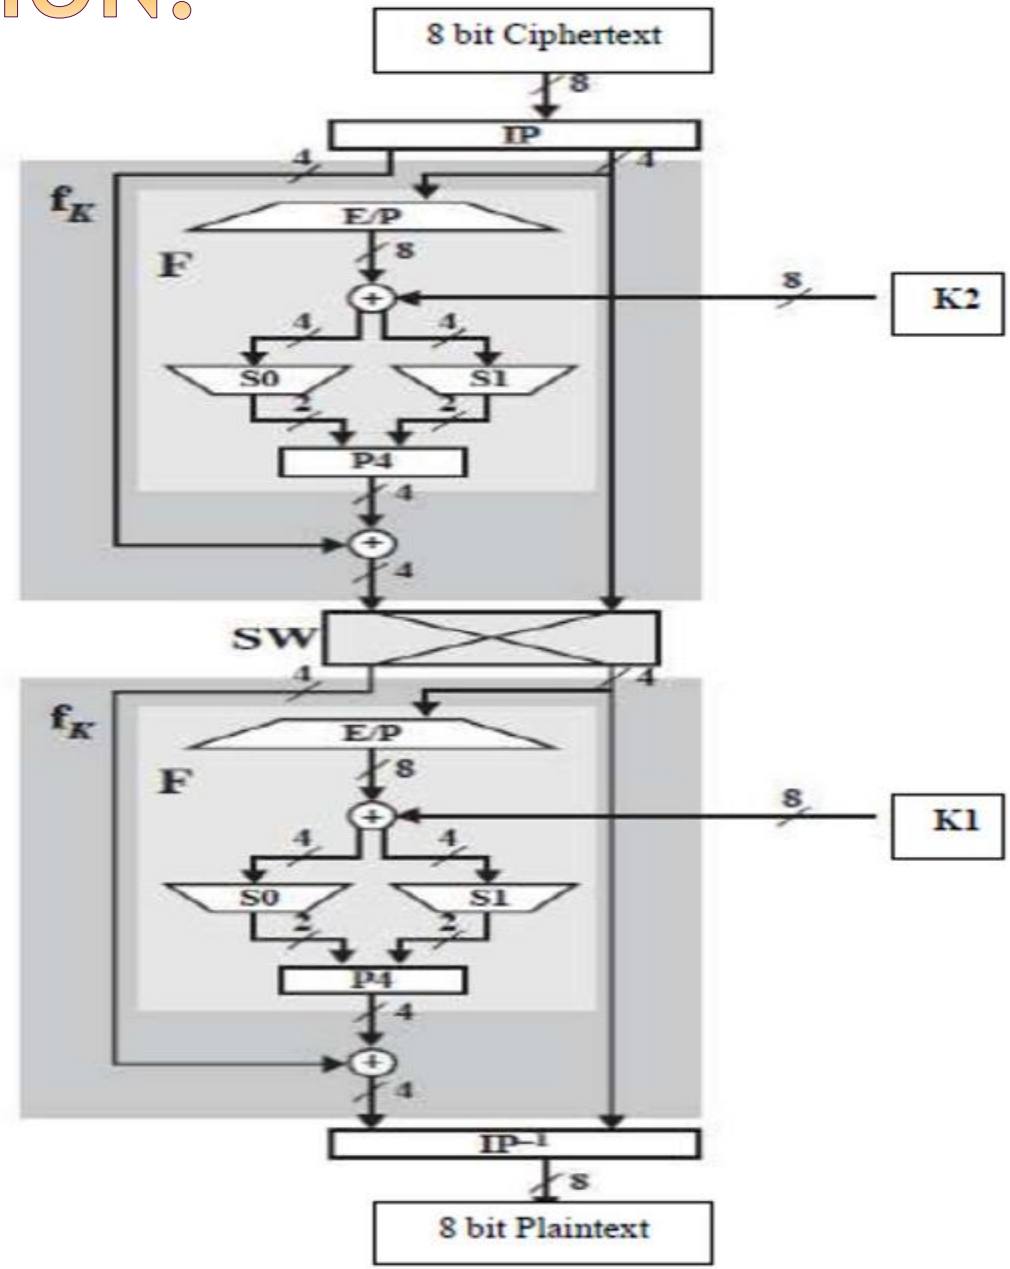
S-DES DECRYPTION:

- The decryption scheme of the S-DES is the same as the encryption scheme but using the subkeys in **reverse order**.



Data Encryption Standard (DES)

DATA ENCRYPTION STANDARD (DES)

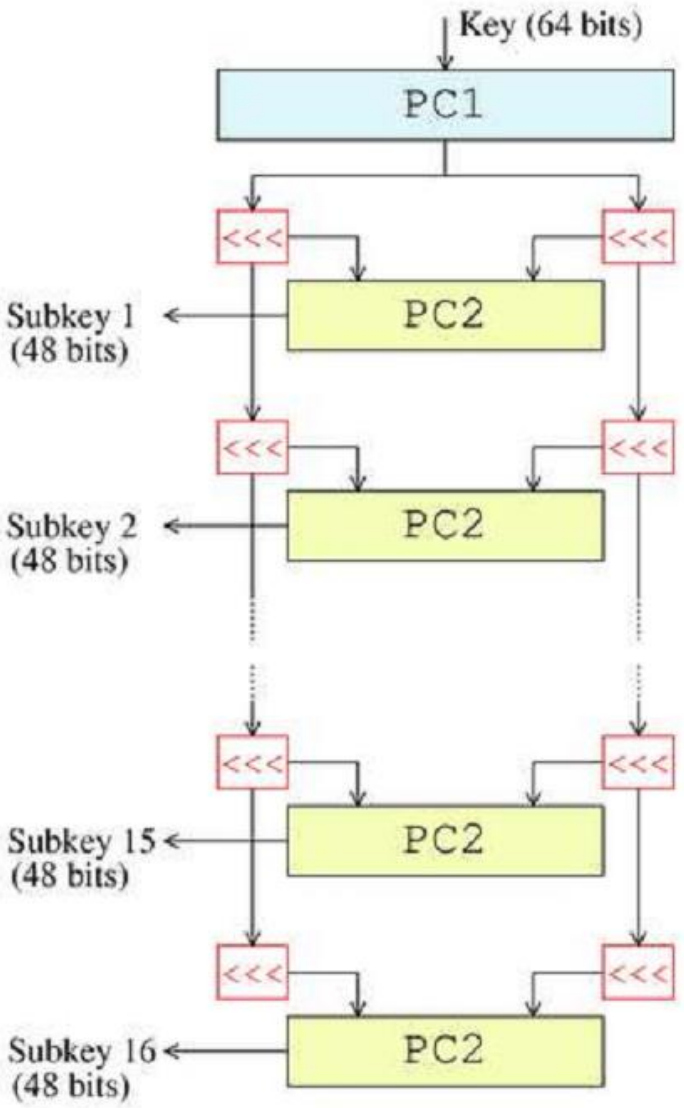
- DES is a block cipher.

  (Plaintext and Ciphertxt size= 64 bits)

- Master Key of size 64 bits.
- The efficient length of the key is 56 bits.
- Brute force attack will try 2^{56} possible key.
- 16 Round.
- 16 subkeys of length 48 bits.

KEY GENERATION:

- DES depends on the use of a 64-bit key shared between sender and receiver.
- From this key, 16 48-bit subkeys are produced for use in particular stages of the encryption and decryption algorithm.



Round Number	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

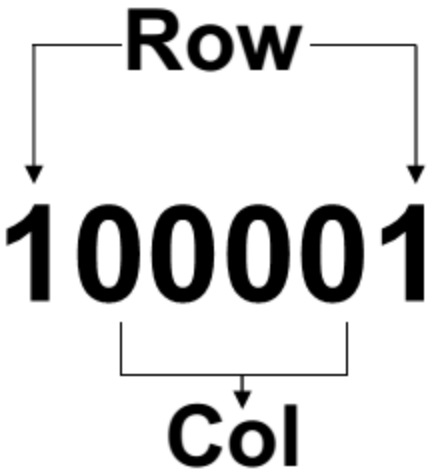
S-BOX IN DES:



I/p of S-box= 6 bits

O/p of S-box is 4 bits

If i/p of S1 is: 100001

The o/p will be: $(15)_{10} = (1111)_2$

DES DECRYPTION:

- The decryption scheme of the DES is the same as the encryption scheme but using the subkeys in reverse order.

DES VS S-DES

DES	S-DES
DES is a block cipher. (Plaintext and Ciphertxt size= 64 bits)	S-DES is a block cipher. (Plaintext and Ciphertxt size= 8 bits)
Efficient Master Key size is 56 bits.	Master Key of size 10 bits.
Brute force attack will try 2^56 possible key.	Brute force attack will try 2^10 possible key.
16 Round.	2 Round.
16 subkeys of length 48 bits.	2 subkeys of length 8 bits.

THE AVALANCHE EFFECT

- A desirable property of any encryption algorithm is that a small change in either the plaintext or the key should produce a significant change in the ciphertext.
- A change in one bit of the plaintext or one bit of the key should produce a change in many bits of the ciphertext.
- This is referred to as the avalanche effect.
- If the change were small, this might provide a way to reduce the size of the plaintext or key space to be searched.
